

CONDENSING TANKLESS WATER HEATERS

Navien ComfortFlow® is the first and only system that incorporates a built-in insulated buffer tank and recirculation pump. The buffer tank eliminates cold water blasts and issues of minimum flow rates commonly found in other tankless water heaters. The recirculation pump saves on water bills by reducing the time to get hot water. When activated, the optional ComfortFlow® mode results in additional energy usage.

Cuts Installation Time in Half

Thanks to using 1/2" gas pipe and 2" PVC venting, you can install a Navien tankless water heater in about half the time as competitive tankless heaters.

Longer Life with Faster Heating

Navien was the first to offer dual stainless steel heat exchangers, rather than copper, which extends the life of the unit by resisting corrosion.

Energy Star Highest Rated Gas Water Heater

The NPE is the most energy efficient tankless water heater in the industry.

Navien's NPE-A Series condensing tankless water heaters provide you with an endless supply of hot water on demand. This is achieved by activating the unit the second you open a hot water tap.

- Ready Link® cascade system
- ComfortFlow® recirculation built-in with buffer tank
- Built-in temperature control and display
- Field gas convertible
- Dual stainless steel heat exchangers
- Easy installation with 2" PVC venting cable
- Low NOx emissions
- Direct vent

Btu: 199,000

Depth: 13-13/64"

Fuel Type: Propane or Natural gas

Ignition System: Electronic

MBH: 199

Supply Pipe Connection: 1/2"

Type: Condensing Tankless

CEC Compliant: For Sale in CA

Flow Rates: Up to 11.1 gpm

Height: 27-13/32"

Material: Stainless steel

Phase: Single

Volts: 120V

Width: 17-13/64"

Specify Propane or Natural Gas

LP-NNPE240ANG - Natural Gas

LP-NNPE240ALP - Propane Gas

Standard ultra condensing tankless technology with the industry's top rated unit for energy efficiency.
